

IDP PRACTICAL EXAMINATION

Duration: 60 minutes

Marks: 20

Create a Dart program with the following requirements.

No	Decription	Marks
R1	Create a class named Account that stores the following details: - A string variable named code, a string variable named name, and a double variable named balance. - A method named getBalance() that returns the balance of the account.	2
R2	Create an abstract class named Bank . This class has four abstract methods: - saveAccount() - findByCode(String code) - totalMoney() - writeToFile(String fileName)	4
R3	Create a class named ATM that extends the Bank class. A HashSet generic list named accountList . Implement the following methods: - saveAccount(): Creates a new ATM object and adds it to the HashSet. Use try-catch blocks to ensure that the balance is a numeric value and greater than \$50. - findByCode(String code): Searches for an account with a matching code within the HashSet. If a match is found, it prints the details of the ATM; otherwise, it displays an error message. - totalMoney(): Calculates and prints the total sum of all account balances in the bank. - writeToFile(String fileName): Saves the account list to a file (e.g., bank.csv). The properties of the Account class objects will be written to this file.	9
R4	Create a class TestAccount that has the main method to test. + Use switch case and loop statements to shows a following menu and exits the application if only exit fuction is choosen 1. Save account 2. Find by code 3. Total money 4. Write to file 5. Exit	5
